KANSIT.COM

**bulletin board system server hosting
echomail networks setup and development
wide range of bbs technical support**

**design mentoring
server hosting
scripts and mods**

"bringing vintage technology to the modern world"

What Can KANSIT.com Do For Your BBSing Adventure?

Jonathan Justvig [cr1mson] and his team at Kansas Information Technology (KANSIT.com) have a large variety of services offered to you to make your journey in Bulletin Board System (BBS) design productive. KANSIT.com is a one stop shop for everything to do with BBS construction, in all areas of getting your system exactly how you'd like it to appear and function. KANSIT.com runs four bulletin board systems, and three echomail networks, including design of Whispernet and maintenance of Sp00knet and Fishingnet Echomail. His server farm hosts GUILD BBS (The PHATstar WHQ), and for all systems hosted by KANSIT each server is given a [name].bbses.org address. We offer dedicated servers that run off RaspberryPi nano computers using ARM-based CPU's for the ultimate in coolness factor. Our server farm runs on a synchronous gigabit Internet pipe. KANSIT.com projects include the creation of the LegionRPG BBS Game. We have created and setup

BBS-related networks, such as Sp00knet echomail and file distro networks AKA FDNs, such as Anonymous Archivers File Distro Net. Connections to dedicated gaming servers such as BBSLink and DoorParty, as well as distributed chat server interfaces such as Multi-Relay Chat. These

are some services that we can install quickly. KANSIT.com isn't a one man island, but can out-source work that others specialize in, such as top level ANSI-BBS artwork to make for attractive menus, and the ability to paint on ANSI graphics, known as ansi-mation. We can help you with ease in settings up your very own bulletin board system network, whether that be a file, message, or gaming network server. KANSIT.com aims to be the go-to point for making your board a world class attraction. We specialize in the GNU/Linux operating systems but are also well versed in the Windows and various RaspberryPi OS's. Every good BBS should have a website to go along with the project, and we can make that happen using the WordPress/Elementor website design platform. We can make excellent websites using stock media providers. One member of our team has created both bbsday.org and phatstar.net. Please hire KANSIT.com to make your dreams a reality in the BBS, Web, and Textmode Scenes.

main menu

- [f] files

Myers-Briggs Personality Door App, \$40 USD

KANSIT.com also outsources scripting work to programmers who are fluent in the Python programming language and the Mystic Programming Language (MPL). To have some of our more complex scripting work done we offer work on a "bounty" basis where our jobs are posted for all to submit their confirmation that they will do the job. If you are interested in fulfilling a bounty please contact us.

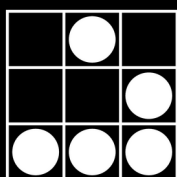

spooknet
a PHATstar production

30+ echonet message areas, 7+ filebone areas, BinkP, 400Mbit/s 700:100/*

KANSIT.com has been hired by the PHATstar Society to administer their premier echomail network, known as Sp00knet. We are also doing the admin work on the new Fishingnet Echomail Network. We can help you too.

FISHINGNET

Fishingnet Echomail Net
400Mbit, BinkP

Here are some specific things that we can do for you. In reality we can do many types of IT Technical Support, however the following list details what we can do for you in the textmode scene, including BBS development. We are "bringing vintage technology to the modern world..."

- **Mystic BBS Theme Development**
- **Design of File Distro Networks**
- **Menu Design: Just Beautiful**
- **File Transfer Protocol Options**
- **Website Design: Using WordPress & Elementor Framework**
- **Installing Plugins: Instant Chat, Door Games, and Apps**
- **Old Media File Recovery**
- **Design of Echomail Nets**
- **File Archive Setup**
- **Scripting New Features**

Our In-House Technology:

- **IDE to SATA/USB kit that helps us to recover archaic media**
- **Pro-level file recovery software that does a very good job**
- **System maintenance and management software (Linux)**
- **Webroot Anti-Virus (for all servers)**
- **Envato Elements Stock Media**
- **USR 56k v92 External Serial Modems**
- **GS HT802 Uncompressed VOIP**
- **WordPress/Elementor Web Design**
- **Server Farm of Raspberry Pi's**
- **1.44" Floppy Drive to USB**
- **Many DVDs for Monthly Backups**

Background: Jonathan Justvig

Jonathan has begun his business in 2020 and is based out of Wichita, Kansas, USA. He is a prolific sysop (system operator) who has been in The BBS Scene for over a half decade. He has been featured on TexTalk News and is really familiar with textmode systems design.

References, Recommendations, and Testimonies

"I have hired KANSIT.com for several years now. KANSIT helps me maintain my echomail networks and I am very much pleased at the quality of his services. He does his work on time, is thorough, and is easy to get along with.

I appreciate his love of the textmode scene; its not just a job but a passion. Thank you!" **-Ryder Navi [warmfuzzy]**

Textmode Magazine's Echomail Networks Book KANSIT has written several articles which will be included in the upcoming eBook and print book on all types of things related to Fido

Type Networks. This book will be a how-to document on everything to do with Echomail Network Art and Science in simple terms. Sales will go back to The BBS Scene.
